CIA 1101: Information Assurance and Security 1

Name: <u>PRIMA, LANCE ROBERT C.</u>	Activity Number: <u>ACTIVITY #2</u>
Section: <u>ITAD</u>	Activity Name: <u>THE WHISTLEBLOWER</u>

Three AWESOME Things:

1. How Social Engineering Works – It was surprising to learn how hackers manipulate human psychology to gain access to sensitive information.

2. The Dangers of Public Wi-Fi – I was amazed at how easy it is for attackers to intercept data when using unsecured networks.

3. Password Managers & Multi-Factor Authentication (MFA) – Learning how password managers create strong, unique passwords for each account was eye-opening.

Two Things to ADVOCATE:

- 1. The Importance of Strong Passwords – Encourage family and friends to use complex, unique passwords for different accounts and enable MFA whenever possible.*
- 2. Beware of Phishing Scams – Teach others to recognize phishing attempts, avoid clicking suspicious links, and verify the legitimacy of emails before responding.*

One ACTIONABLE Thing:

- 1. Enable Multi-Factor Authentication (MFA) – I will immediately turn on MFA for my important accounts (email, banking, social media) to add an extra layer of security.*
